13 June 2011

Marulatech specialises in niche asset monitoring markets. We are presently using the fuel level sensors from Technoton Minsk. The sensors are reliable and durable in the application of diesel fuel monitoring. There have been no failures in our history with them.

The sensors are simple to install by automotive installers and are easy to configure in the system. They are accurate, relatively stable with temperature and are competitively priced.

We have experiences professional service and timeous deliveries in our dealings with Technoton Minsk and would recommend them.

Further information can be obtained from Alex Rawstorne at Marulatech ([alex.rawstorne@marulatech.com](mailto:alex.rawstorne@marulatech.com))
